Opening order packages include the following:

- **12 stock stain colors** in either quarts or gallons plus clear tint base,
- **An RTM Formula Book** that includes all 90 formulas in digital and print format.
- **A chip box containing 102 color chips**—12 stock colors and 90 custom-formula colors—in your choice of oak and maple or alder and maple.

What makes Strong Black different than Tint Base Black? The existing black, Tint Base Black, is a warm color that creates medium-to-deep wood tones when mixed with other RTM Stains. The new black, Strong Black, is a high-strength true black that, together with Tint Gray, will give RTM users the ability to mix a range of grays and blacks.

We have also added **14 new color chips** to the RTM System consisting of the two new stock colors plus 12 new color-mixing formulas. **If you already have the original RTM Chip Box**, you can order a free supplemental set of the new chips.

If you don't have the RTM System: It is the easiest, fastest water-based color-matching stain system on the market. You can match any color on-site in minutes and save money by reducing inventory.
